Surgical Dentistry for Cats & Dogs Workshop

4 - 5 July 2024 | Sydney, iM3 Training Centre

Early bird rates expire 17 May 2024

THE UNIVERSITY OF
SYDNEY

Centre for
Veterinary
Education

Dentistry has become an increasingly essential aspect of companion animal care.

Elevate your veterinary skills with our focused 2-day Surgical Dentistry for Cats & Dogs Workshop. This is your opportunity to be mentored by leaders in the field and be individually guided on techniques and tips that will make your life much easier – and improve your clinical outcomes! Tony Caiafa is recognised as a leader with a capacity to empower vets with the skills they need in daily practice; he will be assisted by Kayo Kuroda, equally a passionate educator.

Beyond just surgical extractions, the canine workshop addresses what to do when complications occur (fractured a root lately, anyone?), the management of Odontogenic

tumours and cysts, as well as pain relief and radiographic interpretation are all covered.

And because cats are not just small dogs – particularly when it comes to dental disease – a whole day will be devoted to feline dentistry. Extraction techniques, gingivostomatitis (including full quadrant extractions), root resorption (crown amputation application and technique) and management of jaw fractures will all feature.
